SANTIAGO CERDEIRA
Full-Stack Web Developer

ABOUT ME

Full-Stack Web Developer. I have worked on various projects, including both front-end and back-end, during my training period.

I have implemented front-end projects using HTML, CSS, and JS, utilizing frameworks such as **Vue.js** and **React.js**, among others.

For back-end projects, I have experience with **PHP** and **Node.js**, using frameworks like **Laravel** & **express**, and working with databases like **MySQL** and **MongoDB**. However, I am more inclined towards JS for both front-end and back-end development because my favorite stack is the **MERN** stack.

Currently, I am seeking to gain new experiences as a web developer and eagerly looking to contribute my skills and passion to a dynamic and innovative company. In my free time, I enjoy continuously learning about programming, startups, business, and UX/UI design.
